

Where Might the Mighty MadBum Move?

Evan Howard

2023-04-20

MadBum's 2022 Season

With the recent news that MadBum has been DFA by the Diamondbacks, I wanted to look at what teams might be interested in picking him up. All the data that I use is from Baseball Reference and Baseball Savant. I'm still very new to R and I realize that much of my code could probably be done easier. Yet, with time and practice I know that I'll get there. As such, when it comes to the table below, the column named 'n' represents Whiff%.

```
## # A tibble: 1 x 11
##   first_name last_name given_name name_suffix nick_name birth_year
##   <chr>      <chr>      <chr>      <chr>      <chr>      <int>
## 1 Madison    Bumgarner Madison Kyle ""          ""          1989
## # i 5 more variables: mlb_played_first <int>, mlbam_id <int>,
## #   retrosheet_id <chr>, bbref_id <chr>, fangraphs_id <int>
```

Player	Season	W	L	WLpct	ERA	G	IP	H	R	ER	HR	BB	SO	Kper9	BBper9	KBBratio	WHIP	n	
Madison Bumgarner	2022	7	15	0.318	4.94	30	156.8	179	97	86	25	49	112	6.4	2.8	10.3	2.3	1.454	0.156

I chose his 2022 season because that is the last complete season, and I feel as though his stats for that season are indicative of where he is at currently. At the time of writing he is 0-3 with an ERA of 10.26, 10 strike outs, and a WHIP of 2.4.

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
